Skills

AI & LLM

LLM Integration, Prompt Engineering, RAG, Ollama, Claude

Backend

Python, Java, Django, Node.js, REST APIs, Docker

Frontend

React, Next.js, TypeScript, Tailwind CSS

Databases

PostgreSQL, Supabase, MySQL

Observability

OpenTelemetry (OTEL), Langfuse, Distributed Tracing

Tools

Git, GitHub, GitLab, Figma

Education

Arden University,

MSc Data Science

Berlin • May 2026 – Present

IU Berlin MSc Computer Science

Berlin • Sep 2023 – May 2026

Thesis: MovieWise XAI (Grade: 1.3)

Gujarat University

Bachelor of Computer Application

India • Jul 2019 – Apr 2022

Languages

English

Fluent

German

Basic

Summary

I started as a full-stack developer, curious about how AI could work inside real products; that curiosity is what led me here. Today I build LLM-powered backend systems, work across observability and semantic search, and still find real satisfaction in helping a team see their own system more clearly. I'm deepening that curiosity with an MSc in Data Science in Berlin, because I want to understand AI at its foundations, not just use it. What I'm looking for next is a team that takes engineering seriously and treats AI as more than a buzzword.

Experience

Firmway GmbH

Frankfurt, Germany

AI Engineer – Working Student

Mar 2026 – August 2026

- Every project there taught me something I didn't know before; this one taught me how real companies track and control AI costs at scale, by building the system myself
- Working with embeddings and semantic search for the first time showed me a side of AI I'd only read about — turning that understanding into a working pipeline was one of my favourite parts of this role
- Rolling out distributed tracing across 8 microservices taught me to think about systems as a whole, not just the part I was working on — that shift in perspective has stayed with me since
- Refactoring a core part of the codebase into cleaner architecture taught me that good engineering is as much about what you remove as what you add

Projects

Madhav

August 2026

A retrieval-augmented question-answering system over the Bhagavad Gita. Combines keyword and semantic search with citation verification, ensuring every answer is grounded in a real, retrievable verse rather than a hallucinated reference. Built with Python and FastAPI.

Pulse

June 2026

A multi-agent content pipeline that researches topics, ranks ideas, and drafts LinkedIn posts in a specific voice — with human approval required before anything publishes. Coordinates five specialised AI agents through a pipeline with a built-in performance-learning loop.

Startup Intelligence Agent

May 2026

A multi-agent AI system that validates startup ideas using a 3-step chain-of-thought pipeline. Analyses market size, competitive landscape, and execution feasibility, then generates a go-to-market plan and a production-ready landing page. Built with Next.js, PostgreSQL, and a structured LLM output pipeline

MovieWise XAI Master's Thesis

Dec 2025

A hybrid movie recommendation system with explainable AI generates natural language explanations for every recommendation using a local LLM and TF-IDF retrieval. Thesis graded 1.3 (94/100).

AI Resume Customizer

Sep 2025

A web application that parses a resume and job description, then tailors the resume to match in one click without fabricating skills. Includes ATS optimisation, job application tracking, and PDF/DOCX export. Built with React, Node.js, and MySQL.
